SCOPE OF WORK & RESPONSIBILITY

❖ **SCOPE OF WORK:**

The Dakshin Dinajpur Zilla Parishad's initiative to install grid-connected solar power systems of 60.5 KWP and two units of 10K WP each marks a significant step towards sustainable energy integration. These systems will be directly linked to the local power grid, enabling the generation of clean electricity and its seamless distribution to meet the district's energy demands.

✓ **Anticipated Transformations in the Current System**

✓ **Enhanced Energy Reliability and Stability**

- **Grid Stability:** Integrating solar photovoltaic (PV) systems contributes to a more stable and flexible energy grid. By decentralizing energy sources, these systems help balance supply and demand, reducing the risk of outages and enhancing overall grid resilience.
- **Voltage Support:** Solar PV systems can provide reactive power support, maintaining stable voltage levels, especially during peak demand periods. This ensures consistent power quality for consumers.

✓ **Economic and Environmental Benefits**

✓ **Cost Savings:** The generation of solar energy reduces reliance on traditional fossil fuels, leading to decreased energy costs over time. This is particularly beneficial for community services and public infrastructure

- **Environmental Impact:** Shifting to renewable energy sources significantly cuts greenhouse gas emissions, aligning with global efforts to combat climate change and promoting a healthier local environment.

✓ **Technological Advancements and Grid Modernization**

- **Smart Grid Integration:** The adoption of grid-connected solar systems encourages the development of smart grid technologies. These advanced systems facilitate real-time monitoring and management of energy flows, optimizing efficiency and reliability.
- **Energy Storage Solutions:** Incorporating battery storage with solar installations allows for the retention of excess energy produced during peak sunlight hours. This stored energy can be utilized during periods of low production or high demand, ensuring a consistent energy supply.

✓ **Local Initiatives and Applications**

❖ **REQUIREMENT OF PROPOSED SOLUTIONS:**

Implementation of a **60 kW, 10 kW & 10 kW power generation project** at Dakshin Dinajpur Zilla Parishad (here in after referred as “**DDZP DDZP 60 kW, 10 kW &10 kW power generation grid-connected project** to promote sustainable energy utilization, reduce dependency on conventional power sources, and lower electricity costs.

❖ SYSTEM COMPONENTS

1. Mounted System

A fixed mounting structure made up of high strength high performance galvanized steel. Panels are pushed in for faster assembly no nuts and bolts are required. The structure is designed for high speed wind load bearing capacity. The installation and anchorage technology can be drawn from experienced highway crash barrier technology. It can be installed solid Rooftop conditions including solid rock. This mounting system comes with a 5-year warranty.

It is looking forward to a new technology which is Innovative and can be installed without any concrete. This technology is known as screw-pile technology. This technology allows erecting the mounting structure in a very less span of time and has a superior holding capacity with distinct advantage in unstable soils. As with this technology the foundation can be erected in few hrs as there is very less concrete work and the mounting is done by the machines, implementation is swift with several hundred foundation points being completed in a day. A PV Array is made up of PV modules, which are environmentally sealed collections PV cells-the devices that convert sunlight to electricity.

This allows some assembly and wirings functions to be done on the ground if called for by the installation instructions. The panels will be mounted in rows and electrically connected with cables. The cable will need to be made safe and tamper proof. The electrical output from the PV panels will be fed via cables to a bank of inverters.

2. PV Solar Module

Top quality, high efficiency, and high wattage (60, 10 & 10Wp) solar panels are needed in the system.

- PV panels which are used in high efficiency mono crystalline cells and are assembled with top-quality raw materials sourced globally.

WEBEL TECHNOLOGY LIMITED

- Panels should be tested in accordance with IEC 61215, IEC 61730, TUV and UL 1703 certified.
- Best-in-class performance ratings proven by field installations with 25-year power warranty.
- Higher strength with wind and snow loads guaranteed up to 80 lbs/ft²

3. Inverters (CONTROL TECHNIQUES)

The grid tie inverter in a solar PV power plant converts the DC power generated by the PV module in to suitable AC power for feeding to the grid. This inverter automates the startup and shut down functions. By incorporating advanced maximum power point tracking technology, it maximizes the energy harvested for PV modules.

To minimize the power losses during the conversion process, the inverter switching technology should be insulated gate bipolar transistors. Multiple inverters are paralleled for large power installations. High efficiency of conversion under partial load conditions is essential for economic viability of the entire solar power station the inverters with their own weatherproof enclosure installed in close proximity to PV modules are required for this project.

Required Inverter Features

- Enhanced conversion efficiency 98% peak
- Enhanced availability
- Greater Yield at low irradiance
- High accuracy MPPT algorithm over a wide voltage range
- Compact and easy to maintain
- Communications and PC tools for local or remote configuration and monitoring.

Control and Automation

Function of inverter, control and automation forms an integral part of PV system. controller should have following control and automated functions:

- Inverter start up, shut off and disconnection sequence.
- Over/under voltage & frequency protection.
- Anti-islanding protection.
- Power tracking to match inverter to the arrays.
- Adjustment of delay periods to customize system shutdown sequence.
- Graphical user interface for real time communications, monitoring and control.
- Optional remote monitoring via internet modem.
- Faults notification via modem.
- Data acquisition and logging.
- DC monitoring.

4. Monitoring Central System

The system should be an innovative monitoring and analysis system for large PV plants. It should be upgradeable with CAN bus compatible components. The system also enables diagnostic and monitoring functions for these components.

Monitoring of central inverters and junction boxes to string level. Transmits the data required for monitoring, such as yields and the system efficiency to the Internet portal. Here the data is converted into straight forward diagrams and stored. A constant target/actual analysis enable malfunctions to be detected in their initial stages. In such cases, a definable group of persons is notified immediately.

WEBEL TECHNOLOGY LIMITED

Electrical protection equipment will be required to be specified in conjunction with PEA, for the connection of the PV plant to the electrical network.

Highlights:

- Remotely monitor, diagnose, manage and control systems, without costly "truck rolls".
- Receive alerts that serve as early warnings to equipment and system issues.
- Perform remote diagnostics, updates and resets to optimize performance.
- Weid Muller monitoring or equivalent will be used to monitor the performance of the solar power plant.

Features and Benefits:

- Control system based on modular concept easy to adapt to any solar application.
- Integrated strings fuse protection.
- No need of local key-pad programming since all parameters can be set in an easier and quicker manner using software.
- Simplified installation since there is no need of auxiliary bus wiring.

❖ MODULE CLEANING:

Modules are exposed to the environment and depending on the local conditions a dirt layer settles on the modules, which reduces the plant yield. Cleaning is executed by a qualified service provider with a suitable cleaning method including man hours, material and cleaning tools. Service Provider will be responsible for OEM warranty support and comprehensive maintenance of the SPV modules including cleaning for five years. Technical consultants will visit the site once in every quarter of a year.

❖ PROJECT IMPLEMENTATION STRATEGY:

Overall project implementation will have the following stages of activities. These stages are not mutually exclusive; to implement the project on fast-track basis, some degree of overlapping is anticipated.

Stage I – Planning of the Project

Stage II - Finalization of the Equipment and Contracts

Stage III - Procurement and Construction

After receiving of purchase order, the project team will follow up regularly to ensure smooth and timely execution of the contract. The procurement activity includes review of drawings, stage and final pre-delivery inspection, and supervision of installation and construction. During construction, the erection and commissioning phase of multiple contracts will proceed simultaneously.

Stage IV - Erection and Plant Commission

It is the commissioning phase where design, manufacturing, erection and quality assurance expertise are put to test. The commissioning team will consist of key equipment manufacturers of the equipment, engineers, and other specialized experts, where necessary. First step during commissioning is to use a designed check list to ensure that the plant has been properly installed with appropriate safety measures.

The commissioning team will follow the internal operating instructions. The plant shall be subjected to a performance test before synchronizations. The plant shall be subjected to a performance test before synchronization under the supervision of professional engineers/consultants.

WEBEL TECHNOLOGY LIMITED

The design of the centralized configuration will start with the DC side of the power plant and then based on the DC section the AC section of the power plant is may be designed.

❖ **PROJECT MANAGEMENT AND ENGINEERING**

Vendor will provide a global expertise in designing, setting up and maintaining large scale grid connected solar farms.

Vendor shall provide the Engineering service including undertaking an engineering study to review the basic design and where possible to suggest optimized design solutions, detailed designs, etc., will also look after civil & mechanical works, equipment supplies and other contracts. Construction design and construction supervision during the execution of the project including quality assurance at site and oversee the contractors` quality systems.

Typical System Integration

The panels will be placed in roof-top only. The roof-top mounting will require a flat level surface and will be set into concrete. The panels will require an area which is not shaded. All the panels will be at least 0.8m from the ground.

The panels will be mounted in rows and electrically connected with cables. The cable will need to be made safe and tamper proof. The electrical output from the PV panels will be fed via cables to a bank of inverters.

The inverters will be housed in a structure to protect them from the weather and from tampering. A design decision based on cost will need to be made whether the inverters are all located in one area or are interspersed around the site.

The power plant will have a SCADA system to monitor the output of the rows of panels. In this way, any system faults can be detected to a particular array and rectified.
