

WEBEL TECHNOLOGY LIMITED

CORRIGENDUM – I

TENDER NO. WTL/WCD/MDM/ICDS/25-26/037 DATED 11.11.2025

Sl. No.	Section No.	Page No.	Clause No.	Present Clause	Revised Clause
1	A	4	-	Product Specification MDM should be listed in the Google EMM directory. The quoted MDM solution should be listed as AER (Android Enterprises Recommended) as per Google platform.	Product Specification MDM should be listed in the Google EMM directory
2	A	5	-	Real-time incident capture: Automatically logs events such as failed policy executions, unauthorized access attempts, app installation errors, and integration failures.	Incident capture: Capability to share log events such as failed policy executions, unauthorized access attempts, app installation errors.
3	A	5	-	Integration-aware alerts: Capture issues from third-party integrations (e.g., antivirus, identity providers) for a holistic view of device health and security posture.	This can be considered as optional feature
4	A	6	-	System Architecture Supports multi-tenant, role-based access.	System Architecture The proposed solution must ensure complete data separation and isolation for this scope of work. Both application and data should be hosted strictly within the India region. In case the solution is offered as a SaaS platform deployed on a public cloud or private cloud, the bidder must provide a written declaration confirming that the Department's data will remain fully isolated and will never be shared, replicated, or accessed by any other tenant, customer instance, or third party under any circumstances. The bidder must also ensure that no cross-tenant data access is technically possible within the platform architecture.
